[Sample boxes for customer applications](#)

Especially nowadays, the qualification of first sample parts is becoming more and more important in the electronics industry. Customer demands and quality standards are increasing and with them the need for first prototypes. In order to provide customers with product samples for the prototype phase, Fischer Elektronik has developed **sample boxes for the various product segments in the field of connectors**.

These sample boxes contain connectors with standard pitches of 2.54 mm, 2.00 mm and 1.27 mm. All common soldering methods are also covered by the different sample boxes. In addition to **connectors for wave soldering (THT)**, a main focus has been placed on the **reflow soldering process with Surface Mount Technology (SMT) and Through Hole Reflow (THR)**. In addition, sample boxes with products from the areas of **sockets, ribbon cable connectors and optoelectronics** are available.

Fischer Elektronik not only develops high-quality connectors, but also offer their customers a flexible and fast sample service, which is designed for numerous application areas. Both standardised and customised connectors are offered. We will be happy to send you a free sample box for your area of application on request.

Contact us. The product specialists at Fischer Elektronik will be happy to assist you for further information and inquiries.
