[New profile mounting case in a rounded design](#)

The comprehensive case programme of Fischer Elektronik has now been extended by an additional design of the profile mounting cases. The new aluminium case with the part number **CG 109 47...** consists of two half-shells which are fitted against each other and contain practical details such as guide grooves for the insertion of 100 mm Eurocards or mounting panels. Furthermore the half-shells have guide channels for inserting nuts and threaded strips, which, among other things, enable non-standard PCBs to be fixed. The half-shells are terminated and fixed by the front panel and rear panel, which are locked in place by the pre-threaded screw channels in the profile by means of a screw fastener. The CG profile mounting case will be available in six different lengths (80, 100, 120, 160, 200, 220 mm) and in black (SA) and natural anodised (ME) surface finishes. The basic case as well as the cover plates can be mechanically processed, surface-treated and printed according to customer specifications. **The CG profile mounting case** is supplied as a disassembled kit including cover panels and mounting material. For EMC shielding of the built-in electronics, the cases can be extended by EMC seals and an EMC silicone hose on customer request. The conductivity of the aluminium components is achieved by an optional transparent passivation, which can also be coated with a protective and decorative lacquer or powder coating surface.
