FINDER PRESENTS NEW CONFIGURATION TOOL FOR YOUR ELECTRICAL ENCLOSURE

With the Finder configuration tool you can choose the ideal device for your enclosure in just a few simple steps

Starting with Project Name you can then choose type of enclosure itself. Within next steps fill in the information to help you to identify the most appropriate devices for your project. Input the most recent data regarding temperature and installation as well as what your enclosure is made of and the power drain of all the components. By proceeding you can review summary and complete the configuration where you be provided with the products suggested for your needs from thermoregulation family.

request a personalized quote, print or save your project and even share with colleagues.
