

T&G NORDIC OY AND SPARKLIKE OY AGREED THE PRODUCTIONAL COOPERATION

T&G Nordic Oy took over the main manufacturing responsibility for the new fully automatic Sparklike Online.

Sparklike Online is a measuring station that is synchronized to the insulating glass production line and complements Sparklike Oy's offering to its global glass manufacturing customers.

” In the past, we specialized in selling thousands of hand-held instruments for the glass industry, for gas filling quality control. Our customers repeatedly started to ask us for an unmanned and fully automated measuring station to be connected to the their production line. After launching the design process and showing our first self-made prototype at an international trade fair in 2018, we realized that we needed a flexible and reliable development- and manufacturing partner for the real size stations. After short negotiations, we decided to choose T&G Nordic as our partner.

They had clear experience in manufacturing engineering and productisation, together with equipment manufacturer personnel. We got a very flexible contract to work together on their premises, completing the first client versions for pilot purposes.”

The most valuable features in the T&G Nordic co-operation are:

- Technical production planning.
- Electrical safety expertise.
- Electrical Documentation.
- Skills in mechanical assembly.
- Testing.
- Quick availability of components.
- Logistic support for deliveries.

All of the above allowed for a rapid and dynamic development phase up to serial production.
